

Since 1934, when Captain E.B. Jeppesen founded his chart business from notes he took as an airline captain, Jeppesen has been driven by a passion for helping pilots fly better.

Dependability and accuracy have made Jeppesen the trusted worldwide leader in aviation charting, navigation, flight planning and training products and services. Today, the innovation and leadership that defines Jeppesen has expanded to include VFR+GPS Charts. This breakthrough is more than the next generation VFR chart, it is the latest step in Jeppesen's unwavering commitment to providing the very best navigation and training products to a new generation of pilots.

# VISUAL FLIGHT REDEFINED.

Jeppesen's New VFR+GPS Charts

Over time, the airplanes you fly, the technology you utilize, the skills you possess and the knowledge you apply for safe flight keep getting better. However, with the exception of semi-annual updating, your VFR charts have remained basically unchanged.

## Until now.

Jeppesen's new VFR+GPS Charts offer a fresh perspective on what a VFR chart should be with better use of color and contrast, coverage areas based on the way you fly, intuitive symbols for easier interpretation, and Space Shuttle radar data to more accurately depict terrain. Jeppesen VFR+GPS Charts are easier to use in the cockpit or at the kitchen table, they're designed to help you get more from your GPS, and they come from one of the most trusted names in aviation.

## A better view.

Severe clear is more than a term for sunny skies. It defines the level of clarity that drove Jeppesen to create the next generation of intuitive single-sided, VFR charts that:

**Emphasize GPS Navigation**—A first in the United States, Jeppesen VFR+GPS Charts enable your paper chart and GPS to work together seamlessly.

**Utilize Pilot Input**—We asked pilots just like you what they wanted in a new generation VFR chart. The result was better color and contrast; more intuitive symbology; and white space for note-taking, to name just a few.

**Reflect How You Fly**—Coverage areas are built around popular VFR flight plans; you're more likely to need fewer charts to get where you're going.

**Work In the Air and On the Ground**—Proven JeppGuide® Airport diagrams are on the back of each chart, creating better situational awareness on the ground—day or night.

## The future is clear.

A VFR chart is only as good as your trust in the information provided and your ability to quickly interpret and act upon it. For students learning to fly, Jeppesen VFR+GPS Charts are easier to use and read, thanks to a more simplified layout. For instructors, they are easier to use as a teaching aid. And for all aviators, Jeppesen VFR+GPS Charts makes your VFR chart a more effective tool for flight planning, and you a more effective pilot, through enhancements like:

**Clear Airspace Boundaries**—Easier recognition of controlled airspace with color-coding and clear labels to show airspace class and altitude segments.

- Faster recognition of controlled airspace.
- Airspace "flags" show classes and altitudes.
- No need to search and decode airspace altitudes.

- "Pink" fill indicates controlled airspace to floor to help visualize the "upside down wedding cake."
- Color-coding adds a "third dimension" to airspace structure.
- Easier to learn for a student, easier to teach for an instructor.

**Streamlined Airport Symbology**—Jeppesen has updated familiar VFR chart symbology, making it easier to understand. This is especially important when approaching a busy unfamiliar airspace.

- Large airports (over 9,000 ft.) are depicted with the airport property boundary for faster recognition from the air.

- Private airports are depicted with runway layouts to aid VFR navigation.

**GPS Waypoints**—They're spelled-out easily and clearly, making planning flight and flying the plan much easier.

- All VFR checkpoints and waypoints are listed on the back side with GPS coordinates—an industry first.
- Waypoints are clearly identified.

**JeppGuide® Airport Diagrams**—With airport diagrams on the back, your VFR chart can be a useful guide from engine start-up to shut-down.

- Better situational awareness on the ground, day or night.
- Invaluable local airport information for unfamiliar airports.
- Local restaurants and hotels in the "Local Area Guide" section.

Your next VFR chart should come from a name you trust. To get your new Jeppesen VFR+GPS Charts, visit your favorite pilot shop, FBO or aviation dealer.
