**KENNON SUPER SUN SHIELDS**

The most durable sun shield on the market has a clear polyester coating to protect the plexiglass windows. Heat can permanently damage the interior and avionics in your aircraft. The secret is a material with two surfaces of aluminum surfaces by trapped air. This combination reflects 97% of radiant heat, an insulation value of R-9 equivalent to two inches of fiberglass. Kennon Extra Firm shields fit snugly, and maintain their shape for a tight fit. They install in no time, and roll up for storage in compact, water-repellent bags. Weight is 11 lb. Available for most model of aircraft. Color is black, white, or grey. For custom shields, specify exact size of window & windows. Also available for cars. Fabric edge insures snug fit & durability.

**PIPER SUNVISOR CATCHES**

Many Piper aircraft have the same problem. The sun visor catches lose to stability, because the UV effect allows the plastic to become porous. These cowl plugs are made from a blended poly-plastic with a UV additive that will prevent UV corrosion. A set contains two pieces with the required plastic rivets. They are available in white and black (used in Piper PA-38 Tomahawk). The set for the Piper Tomahawk contains two extra rivets.

**KENNON COWL PLUGS**

Kennon cowl plugs are constructed from red Aqualon over 2” thick foam and feature a binding around the outer edge of each plug, so there is a tight seal which fits snugly in the cowl. This lip prevents the plugs from slipping inside the opening. A safety strap goes around the prop so if by chance you forget to remove the plugs, the prop will remove them for you. These cowl plugs install easily and comes with their own storage bag. Specify aircraft make, model & year when ordering. Include aircraft registration number to be printed on plugs at no extra charge.

- **Single engine plugs**
  - P/N 13-14111 .................. $95.00
- **Twin engine plugs**
  - P/N 13-06212 .................. $190.00

**CUSTOM FIT COWL PLUGS**

These cowl plugs are tailored to fit popular Cessna and Beech single engine aircraft. High visibility yellow closed cell foam will not retain moisture. Printed on one side is “Remove Before Starting Engine”, and the other is blank for the N9. They are joined by a nylon binding with a fluorescent yellow “Remove Before Flight” flag. Please use following part nos. to specify aircraft.

**KENNON WIND SPOILERS**

Kennon Wind Spillers are a strip of soft fiber filled tubes that attach to the wing to slow airflow over the top and to prevent lift. An airplane was built to fly, given a strong wind, the plane will fly without you and no take down will restrain a flying airplane for long. During the stormy winter of 1998, over 200 airplanes were picked up and deposited on roads by strong winds. Kennon Wind Spillers could have saved many of these aircraft. The wind spillover cover the leading edge of the wings but not the tips, and most are about 14.5 ft long (per wing). Specify aircraft make, model, year when ordering.

**KENNON COWL CAP COVERS**

This small cover goes over the inlets and back onto the cowl about 12 inches. It closes under the spinner with Velcro. There are bungees with hooks on the two rear corners that keep the cover pulled back in place. The material used is Red Sunbrella UV resistant, water resistant and yet breathable. This is a great alternative to plugs that often slide out of the opening or do not wedge straight in the opening due to the inside shape. Covers are available with Tall Nose for identification through a sewn on embroidered patch. Please specify aircraft year, make and model.

**PROPPASTIE**

A ground-use only cover that will minimize snow, ice, and water from laying on your propeller hub bearings and freezing inside the engine. Made of the highest quality UV-stabilized materials, designed to withstand all but the most extreme temperatures. Texted to remain in place in up to 51 mph wind gusts. Velcro, holds the prop in place.
