

Oil Filter Media Cutter Instructions

Materials Required:

1. AA-470 Oil Filter Can Cutter
2. AA-471 Oil Filter Media Cutter
3. Tin Snips (optional)

Procedure:

1. Cut open Oil Filter using Oil Filter Can Cutter p/n AA-470.
2. Remove Oil Filter Media Pack from filter can and discard any excess oil.
3. With the Filter Media in your left hand, rotate Filter Media until you find the metal band that runs between the top and the bottom of the Filter Media.
(Note: Your AA-471 Media Cutter is NOT designed to cut that metal band).
4. With the AA-471 Media Cutter in your right hand, insert the knife blade of the AA-471 Media Cutter into the paper media just below the metal band on the side of the filter furthest away from your left hand. The plastic guard on the AA-471 should be on the bottom of the Filter Media.
IMPORTANT: Make sure that the knife completely penetrates the paper media.
5. Rotate the AA-471 around the Filter Media, cutting away or down from you. Your left hand should be rotating the Filter Media in a counter-clockwise motion.
6. Rotate the tool around the filter to end at the metal band, or to cut only a section of filter media for inspection. Note: On some large filters the Filter Media is deeper so you may have to cut around the Filter Media a second time to insure completely cutting through the paper media.
7. Flip the Filter Media around and follow steps 3-6 again to cut the other side of the Filter Media.
8. When both sides of the Filter Media have been cut, you may cut the metal band with tin-snips and remove the Filter Media, or using a utility knife, cut vertically the Filter Media on either side of the section you wish to remove for inspection.
9. Inspect the Filter Media per your maintenance manual or maintenance procedures listed by the engine manufacturer and/or the Oil Filter Manufacturer.
10. Note: Always use a sharp knife blade for clean results and easy cutting.

Cautions:

- The AA-471 contains a very sharp knife, **ALWAYS** use caution!
- Wear appropriate eye & skin protection.
- Use caution when handling the Filter Media as it may be hot or slippery.
- Keep this tool **OUT OF THE REACH OF CHILDREN.**
