INSTRUCTIONS

ASSEMBLY PART NO. BA-4210

APPROVED ON AIRCRAFT MODELS: SEE FAA APPROVED APPLICABILITY LIST

REPLACES: P/N 13203

FAA APPROVAL DATA:  STC-SA71GL List No. 1
                        FAA-PMA Supplement No. 1

Your new polyurethane air filter element has been designed to provide maximum dust collecting efficiency, non-restrictive air flow, and economical element replacement, while maintaining a lightweight filter. The element has been treated with a distinctive treatment called a wetted agent and is approximately 98% efficient. The wetted agent is an accompaniment in the efficient capturing of dust. In addition, the element has received a fire retardant treatment. For the above reasons, replace the element each 100 hours of use/12 months or when 50% covered with foreign material. DO NOT WASH AND REUSE.

INSTALLATION INSTRUCTIONS

STEP 1. Remove existing filter and gasket from carburetor heat box and discard.

STEP 2. Remove element BA-4108 from plastic bag. Install into frame assembly, making sure that the taper of the element fits the taper of the frame.

STEP 3. Fasten grill onto frame with 2 ea. MS24693S49 countersunk screws.

STEP 4. Install complete assembly with the 4 original screws onto aircraft, using the same procedure as original. Be sure the gasket and steel mesh side is toward engine.

STEP 5. NOTE: After initial installation of filter assembly, fill out FAA Form 337 for return to service. On future replacement of parts this form will not be required.

SERVICING: Under normal conditions, replace filter element, PN BA-4108 after 100 hours use or 1 year intervals. Under severely dusty conditions, check daily and replace when element is 50% covered with foreign material. For Continued Airworthiness Instructions, see Form I-194.

Supplemental Type Certificate  

Number SA71GL  

This Certificate issued to  BRACKETT AERO FILTERS, INC.  
7052 Government Way  
Kingman, Arizona 86401  

certifies that the change in the type design for the following product with the limitations and 
conditions therefore as specified herein meets the airworthiness requirements of Part  * of the *  
Regulations.  

Original Product Type Certificate Number:  *See attached Approved Model List (AML)  
Make:  *(AML) No. SA71GL for list of approved aircraft  
Model:  *models and applicable airworthiness regulations.  

Description of Type Design Change:  Installation of air filters in accordance with AML No. SA71GL  
dated April 17, 1995, or later FAA approved revision.  

Limitations and Conditions:  Approval of this change in type design applies to the above aircraft  
model(s) only. This approval should not be extended to aircraft of this model on which other previously  
approved modifications are incorporated unless it is determined that the interrelationship between this  
change and any of those other previously approved modifications will introduce no adverse effect upon  
the airworthiness of that aircraft. A copy of this Certificate and FAA Approved Model List (AML) No.  
SA71GL dated April 17, 1995, or later FAA approved revision must be maintained as part of the  
permanent records for the modified aircraft.  

This certificate and the supporting data which is the basis for approval shall remain in effect  
until surrendered, suspended, revoked or a termination date is otherwise established by the  
Administrator of the Federal Aviation Administration.  

Date of application:  January 9, 1975  
Date issued:  February 21, 1975  

Date revised:  March 3, 1983, June 20, 2000  
Date amended:  April 17, 1995  

By direction of the Administrator

INSPECTION INTERVALS: Pre-flight inspections, engine backfire inspection, 100 hour inspections, annual inspections, filter element replacements.

INSPECTION PROCEDURES

A. Pre-flight inspection: Per Pilots Operating Handbook, check filter assembly for security, damage or 50% contamination of element face. If found report to maintenance personnel prior to flight.

B. Engine start-up backfire inspection: Prior to flight, check the entire intake system for security or damage. If a fire was present, the downstream face of the foam element will show erosion. If any irregularities are found see Chart I and also refer to the Aircraft Maintenance Manual for the intake system.

C. At element replacement intervals: With the element removed, inspect the filter grill, filter frame, filter mountings and entire intake system for security, wear and any deformation. Note: On filter assemblies with gaskets, visually inspect inside and outside of frame for any signs of gasket looseness, movement or deterioration. If found refer to Chart I or the proper maintenance manual for your aircraft or component.
