COM 2KR

Remote VHF Transceiver

\$1195

The innovative COM 2KR from Val Avionics is the first radio to offer complete user interface through the electronic flight instrument system (EFIS) display. This provides full control of transmit and receive frequencies as well as volume and squelch from the EFIS, allowing the COM radio to be removed from the instrument panel.

The COM 2KR is the next step in general aviation communications. As with all Val Avionics products, the COM 2KR is crafted from a solid brick of aluminum for maximum durability and performance for years to come. Supporting both 14- and 28-volt systems, the COM 2KR is outfitted for flexible installation in nearly all light-sport, experimental and type-certificated aircraft.

COM 2KR Features:

- Complete EFIS integration via RS232 interface.
- 8-watt transmitter.
- Milled billet aluminum construction.
- Meets requirements of TSO-C169a.
- Compact design:
L: 8.75" W: 5.9" H: .86"
- Manual squelch control.
- Integrated mounting tabs.
- Standard BNC connector.
