### 1.1 Fitting Your Headset

Wearing your headset properly is paramount to achieving both comfort and noise attenuation. First slightly loosen the hand adjustable knobs on the headband. The headset should be placed on your head and slowly pulled down so that each ear cup is properly positioned over each ear for maximum noise attenuation. Tighten the knurled knobs when the headset feels correct.

It should apply slight pressure on your head without being snug. You may need to make your final adjustments in the high noise environment of the cockpit.

### 1.2 Volume Control

The PA-1101 is fitted with an individual volume control.

### 1.3 Foam Ear Seals

Your headset is fitted with our premium foam ear seals. The ear seals are outstanding in noise canceling and are lightweight and keep the headset at a comfortable weight.

### 1.4 Multi-Cushioned Head Pad

Our PA-1160LO has a multi-cushioned head pad that will distribute the weight of the headset over the entire top of your head. No more hot spots!

## PA-1101 Listen Only Headset Manual

Sheepskin Head Pad

Soft Fleece Head Pad

Cloth Ear Seal Covers

Custom Padded Headset Case

### 2.3 Taking Care of Your Headset

Treat your headset like you would treat your stereo and computer at home. To insure the full life of your headset. Keep it clean and free of dirt and you will extend the headset's life giving you many years of extra flying plea

Clean your headsets with non-alcohol wipes or a soft slightly cloth dampened with water and a mild soap. Never use alcohol. Plastic parts dry out or fray when exposed to alcohol based products. Headband, ear cups, ear seals and cords can be lightly cleaned but one should be careful around the microphone and speakers on the headset.

### 2.4 Ear Cushions

Ear seals also need periodic replacing. Depending on how much you use your headset, temperature (extreme heat or cold) also influences the life span of your ear seals. We have several types of ear seals on our headsets. Generally, PVC, foam and silicone gel style ear seals can be wiped off with mild soap and water. Do not submerge the ear seals in water. Three types of our ear seals have vent holes and water would enter the ear seal's vent holes ruining the ear seal.
