Model AGM64RR

- Patent Pending

DESCRIPTION

The AGM64RR is our new diesel locomotive starting battery. Utilizing fully sealed lead acid technology, the AGM64RR is a single 64VDC battery that replaces traditional, flooded batteries, and can double as a heavy-duty external jump starter.

The battery is virtually maintenance free, which enhances safety by eliminating the need to “water” the batteries at specific intervals. A built in charger allows the operator to charge the battery from any standard 110V outlet in cases where recharging is needed.

The AGM64RR also features Start Pac’s patented quick-change technology, which allows the user to quickly disconnect the top and the charger from the battery module in cases where the battery needs to be replaced. A new battery module is sent to the customer and the existing charger and top can be used, while the old battery module is disposed of.

Built in fork lift channels allow for easier handling of the AGM64RR.

SPECIFICATIONS

- 64VDC
- 140Ah
- 1600CCA
- 795lbs
- Dimensions: 41” X 27”x 16”
- Built in 15A output charger. Input 110VAC
