

McFarlane FAA-PMA King Air Drain Valve Saves Over \$20,000 Per Airplane

Baldwin City, Kansas (June 28, 2016) - McFarlane Aviation Products is now offering a longer-life and repairable alternative to the costly Beechcraft King Air Fuel Drain Valves. The new and improved McFarlane valve features an updated seal design, Teflon-lined conduit and stainless steel cable, and includes an unheard of ten year warranty.

The McFarlane valve continues to save operators money even after the initial purchase because it consists of two components: a valve housing and a replaceable valve control plunger assembly, so even when the valve does finally fail after many years of service, it can be repaired at a fraction of the cost of the original purchase. Only McFarlane valves are repairable; Beechcraft valves do not have replaceable components.

McFarlane valve P/N MC90-380016-1 is approved for Beechcraft King Air Models C90, C90A, C90GT, C90GTi, E90 and F90 (S/N LA-2 thru LA-201 and LA-203 thru LA-204). P/N MC90-380016-1 is an FAA approved replacement part for Beechcraft P/Ns 5051-1, 90-380016-1 and HE751-3-300.

McFarlane Aviation Products has supported general aviation with high quality innovative aircraft parts at affordable prices for over 25 years.
