PEEL PLY – PRIMERS – PAINTS – TOOLS

PEEL PLY
A layer of 2.7 oz. Dacron fabric strips or tape laminated into a layup as it were an extra ply of glass. The peel coat wets out with epoxy like glass cloth and cures along with the rest of the layup. However, the Dacron does not adhere structurally to the glass and when peeled away it leaves a surface ready for glass-to-glass bonding without sanding.

Requirements for Small Aircraft:
• 3 Rolls of 1” x 50 Yds. Tape • 2 Rolls of 2” x 50 Yds. Tape • 1 Roll of 3” x 50 Yds. Tape • 1 Roll of 4” x 50 Yds. Tape

Discount Schedule for Dacron Tapes:

PVA RELEASE FILM
PVA (Polyvinyl Alcohol) should be used with #1016 Wax to aid in the release of parts form a mold. It should be applied in 3 thin coats over nonporous, waxed mold surfaces. After the final wax has dried, begin by spraying a light tack coat of PVA. Typically, within 5 mins. the final heavier coats can be added. The PVA dries to form a smooth, glassy film. After part release, the residual film can be removed with water. We recommend using an inexpensive automotive siphon spray gun and 70-90 psi for application, although airbrushes will work on hobby size projects. PVA can also be sprayed on an epoxy-resin repair to provide an airless tack-free cure. For use with epoxies.
