BF GOODRICH ICEX II FOR DE-ICERS
Ice coating boosts your de-icer performance so you fly with greater confidence by helping your de-icers shed ice at peak efficiency. Ice coating chemically bonds with rubber de-icer surfaces and forms a slick film that makes your de-icers slippery. It will lower the adhesive bond between ice and de-icer surfaces so your de-icers break the frigid grip of ice better and faster! Ice coating is easy to apply and economical, too. A single application provides 50 flight hours of added ice-fighting protection on leading edge de-icers and 15 flight hours of protection on prop de-icers. Get Ice coating in quart cans for an attractive uniform satin finish on your de-icers. One is enough to treat a complete single or twin-engine aircraft.
