K11 AIRCRAFT PANEL DIMMER
Features: 3 outputs with a tracking capability where one output is the “Master”, and the other two can be set to track the master from 0 to any set voltage behind the master. This allows items on the dimmer bus to be grouped according to their relative brightness. Photocell light sensor automatic control capability. Low cost. Performance:
Voltage range: 0 to Input supply - .6V
Output current - Depends on ventilation - Each channel is capable of 5 amps, practical dissipation limitation is ~ 5 amps total for all channels. (For 28 volt systems, current limit is 1 A per channel) Unit connections are made through a DB15 connector, and are easy to integrate into the rest of the aircraft wiring.
