FMC-2000 OIL FILTER MEDIA CUTTER
This patented tool is designed to hold Champion Aerospace brand Aviation oil filter spoons, and to allow cutting the paper filter media at each end of the spoon without holding the filter spoon by hand. Using this tool reduces the risk of cutting one’s hands while cutting the filter media as well as reducing the time necessary to accomplish this task. The filter media is rotated in a special holder that is supported by roller bearings. A knife, with a retractable safety cover is brought into position to make a clean cut of the filter media at each end. The filter media can then be removed for inspection. Patented.

TOMS OIL FILTER CUTTING TOOLS
Tom’s oil filter cutting tool will allow you to inspect your aircraft’s oil filtering material for trapped debris in a quick and easy manner. Oil filter inspection is a critical measure of your engine’s health and should always be a part of your aircraft’s regular maintenance program. Most filter cutters work like a pipe or tubing cutter in that you have to go around and around the filter, adjusting cutter depth with each pass. Although you could do that with this tool, the real beauty of this new product is that the cut can be easily made in one pass. The tool is designed primarily for Lycoming oil filters that have a threaded insert protruding from the end of the filter. A few Lycoming oil filters and most Continental oil filters do not have this insert. For these filters, an adapter insert is supplied with the tool. Tom’s oil filter cutter may also be used on smaller filters such as found on Rotax or automotive engines. Simply remove the cutter handle and reposition the pivot bolt to the inner hold on the base handle. The adapter insert may be needed on these filters as well. Made in USA.
