### AIRCRAFT SPRUCE IS PROUDLY OFFERING CUSTOM AND STOCK AVIONICS WIRE HARNESSSES

We have added an in-house harness assembly shop providing avionics wire harnesses for the experimental market ranging from single avionics units to custom coax cable assemblies to complete panel wiring systems. Our harnesses are all professionally assembled and neatly labeled allowing for easy installation by the customer. Although many of the harnesses are standard and stocked on the shelves for same day shipping, we also offer our customers custom-made harnesses to specific lengths for each wire you will need during installation. When you start working on your avionics panel, rely on our shop's expertise and support for all your harness needs.

### LASER WIRE MARKING

We provide a complete laser wire marking service for all of your harness needs. With a marking system meeting MIL-W-5088L, AS-5088-L, and SAE ARP5607, you are ensured a high-quality result. Simply select your white shielded or unshielded cable and provide the necessary text and spacing.

Custom options are available for additional unlisted wire types, as well as for up to three different texts on the wire. Please contact Avionics Sales for a quote by calling 800-826-3160.
